Google Photos Overview.

One of many options

Google Photos app on smartphones and Tablets

Google Drive app on laptops and desktops

Use Google Drive if you desire folder structured storage

Share storage by logging on everywhere (Photos, Youtube, Gmail, etc.) with same username and password

File compatibility across all OS's

What are the different types?

The infographic displays logos for Windows, Linux, macOS, iOS, Android, and Windows Phone. Each logo is accompanied by a list of characteristics and a brief description of the operating system.

- Windows:** Most popular OS, used by many businesses, supports many applications, easy to use, but can be slow and has many viruses.
- Linux:** Open source, free, secure, stable, and fast. Used by many servers and supercomputers.
- macOS:** Developed by Apple, used on Mac computers. Known for its stability and security.
- iOS:** Developed by Apple, used on iPhones and iPads. Known for its security and ease of use.
- Android:** Developed by Google, used on many smartphones and tablets. Known for its flexibility and wide range of devices.
- Windows Phone:** Developed by Microsoft, used on smartphones and tablets. Known for its integration with other Microsoft services.
